## Voice over script

Hi! Welcome to XMPie uCreate Print training.

In this module we install uCreate Print and take our first look around the user interface.

If you don't already have the installer, you can download it from the XMPie website. From the Support tab, select Trial Software and Tutorials.

Click to select the installer for either Macintosh or Windows.

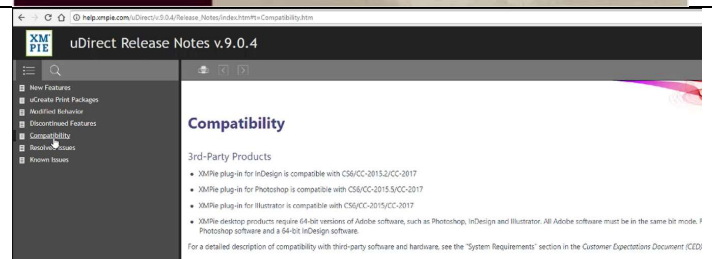

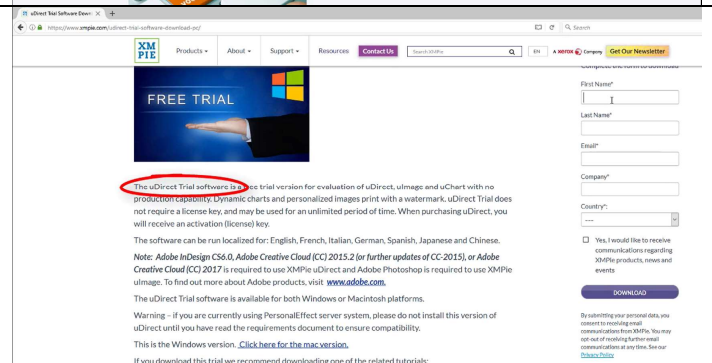

Oh! You will notice that this page talks about uDirect. This is the name of the package that XMPie sells. uDirect Trial includes uCreate Print, ulmage and uChart.

Complete the form and click Download.

Before we run the installer, we need to check that a compatible version of Adobe InDesign is installed. In this case, I have InDesign CC2017.

The current version of uCreate Print – version 9.1 – supports InDesign CC2017 and CC2015. If you have an earlier version of uCreate Print it may also support InDesign CS6 or earlier. For exact details, refer to the release notes for your version. Release notes are available from <http://help.xmpie.com>

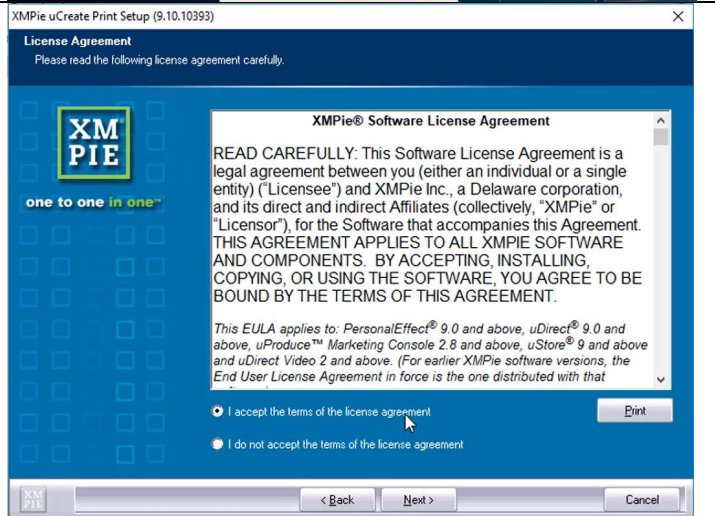

## Thumbnail

Quit InDesign, and run the installer. You need to be an administrator on your computer. It will not install correctly if you do not have administrator permissions.

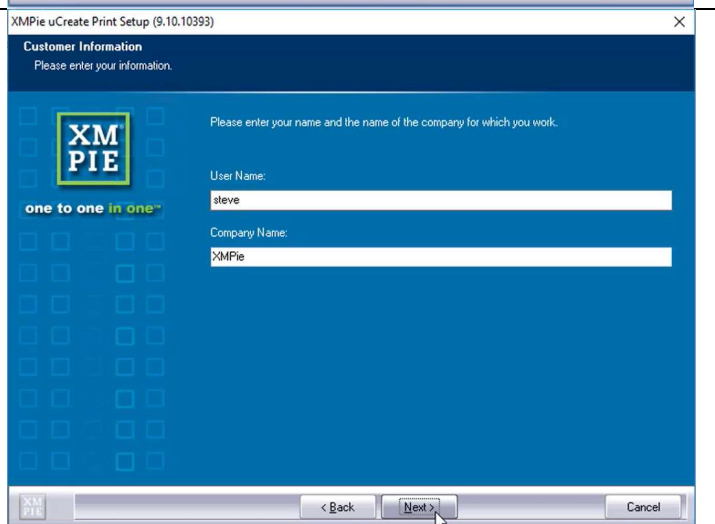

Agree to the license,

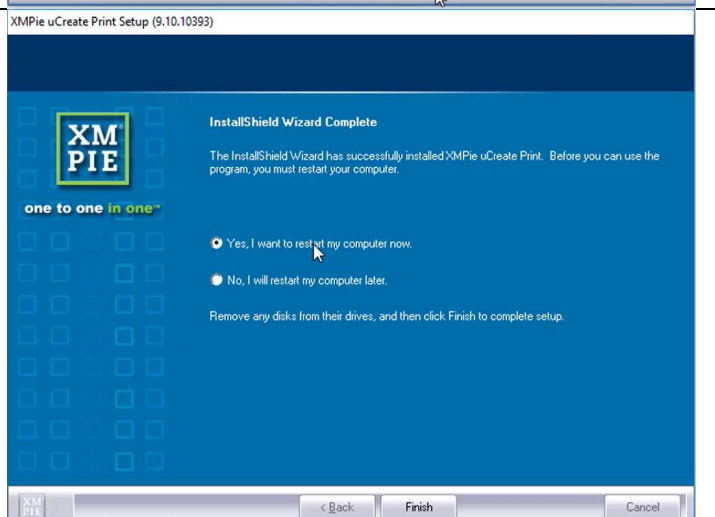

and enter your name and company. The installer is very basic with no configuration settings to make.

The installer will always add uCreate Print to the latest compatible version of InDesign that it finds on the computer. So, if you have multiple versions installed, uCreate Print will only work with the latest InDesign version.

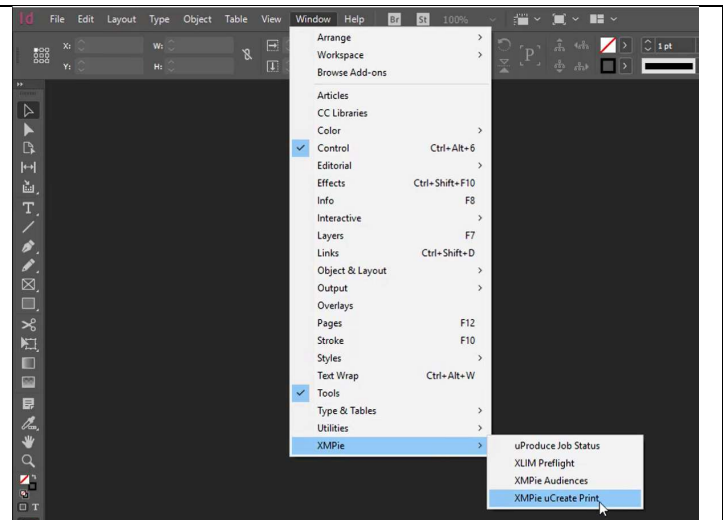

After installation, it is recommended to reboot to make sure everything is setup correctly.

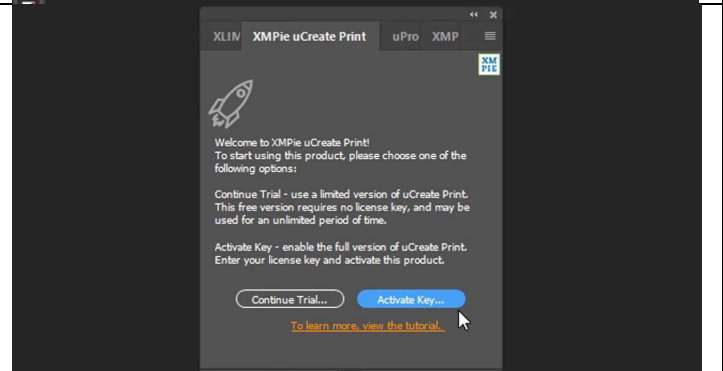

After restarting, open Adobe InDesign.

If the uCreate Print panel is not visible, you can open it from the Window menu.

In addition to the uCreate Print panel, there are also panels for uProduce Job Status, XLIM Preflight, and XMPie Audiences. The first two are used when you also have the uProduce server which comes with the XMPie PersonalEffect package. The Audiences panel allows you to segment your data into different groups. There are separate modules about these tools later in this e-Learning course.

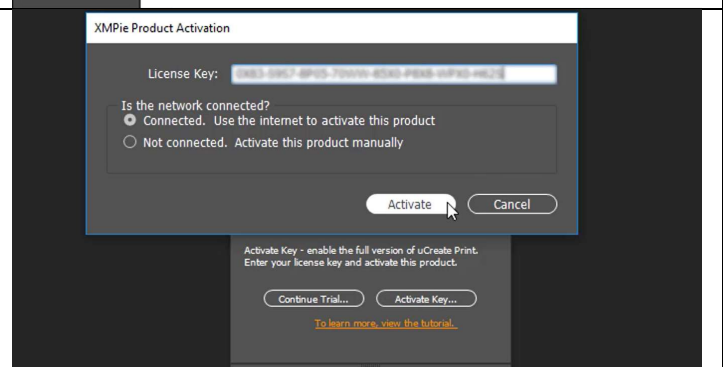

To start, you will be offered to continue in trial mode, or to activate your license.

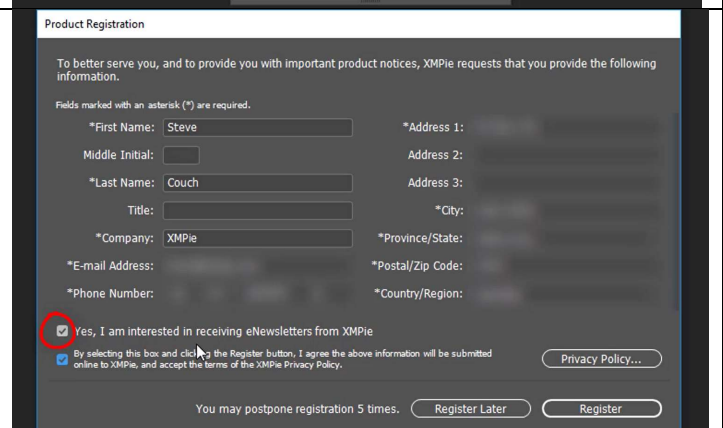

Some uCreate Print features are controlled by the license that you activate. In the release notes, the uCreate Print Packages tab highlights the different features. In trial mode, for example, you will not be able to link to a plan file or create VDP output, so if you have a license, you should choose to activate it.

If your computer has access to the internet, you can simply add your license and click to activate.

After activating, you will be asked to register. You can choose Register Later if you wish, but I recommend you to register and check the box to receive information from XMPie marketing. There is only one newsletter each month and you can learn new tips and tricks as well as find announcements about new versions and upgrades.

The uCreate Print panel shows you the basic steps needed to get started – open a document, link to data, add content objects to the document, and dynamic print.

That's it! You are now setup and ready to continue with the following training modules or to start using the product.
