## Voice over script

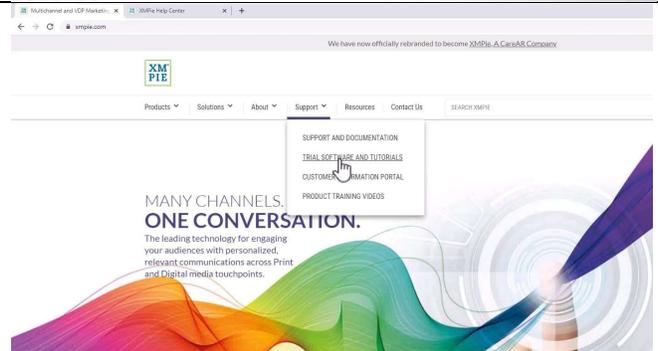

Hi! Welcome to XMPie uCreate training.

In this module we install uCreate and take our first look around the user interface.

## Thumbnail

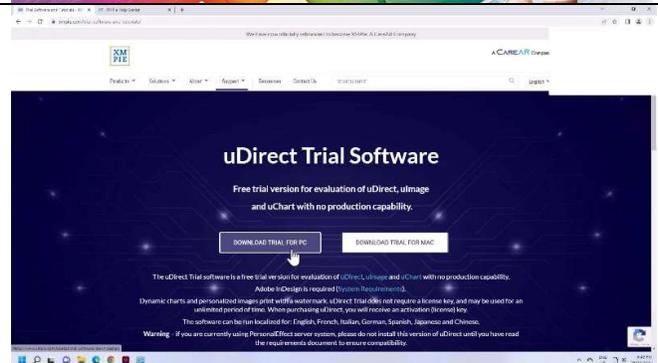

If you don't already have the installer, you can download it from the XMPie website. From the Support tab, select Trial Software and Tutorials.

Click to select the installer for platform - either Windows or Macintosh.

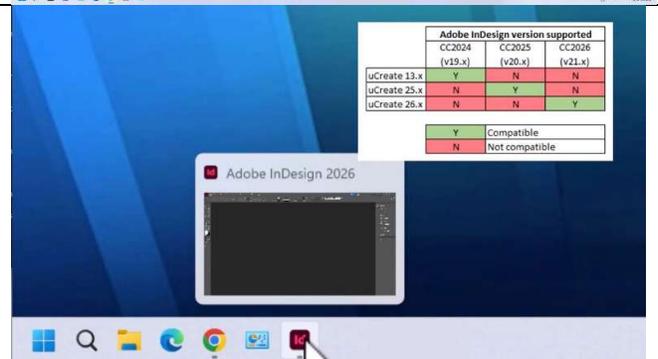

Oh! You will notice that this page talks about uDirect. This is the name of the package that XMPie sells. The uDirect package can include uCreate, ulmage or uChart features depending on the license that is used to activate it.

Before we run the uCreate installer, we need to have Adobe InDesign installed. In this case, I have InDesign CC2026.

The uCreate installer is matched to the InDesign version. For InDesign CC2026, I need to install uCreate version 26.x.

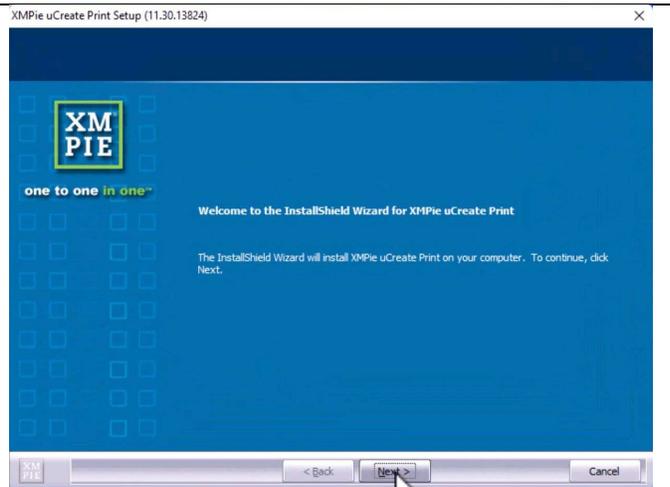

If you have a different version of InDesign, you can request a different uCreate installer from XMPie support. For the full system requirements, refer to the release notes for your version. Release notes are available from the <https://help.xmpie.com> website.

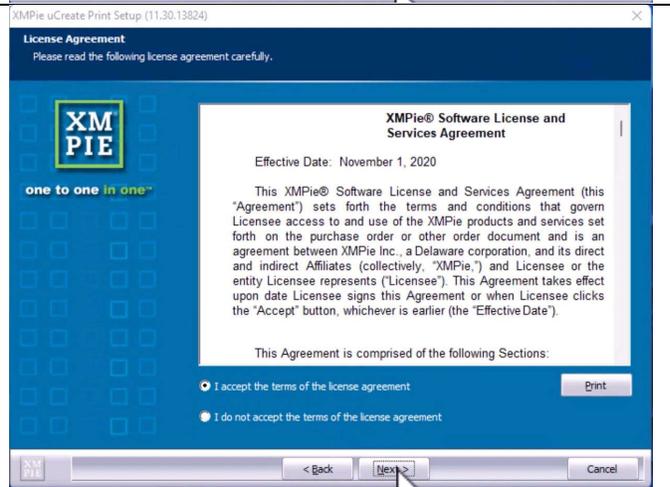

Quit InDesign and run the installer. You must be an administrator on your computer.

It will not install correctly if you do not have administrator permissions. In a corporate environment, this may require some assistance from your IT department.

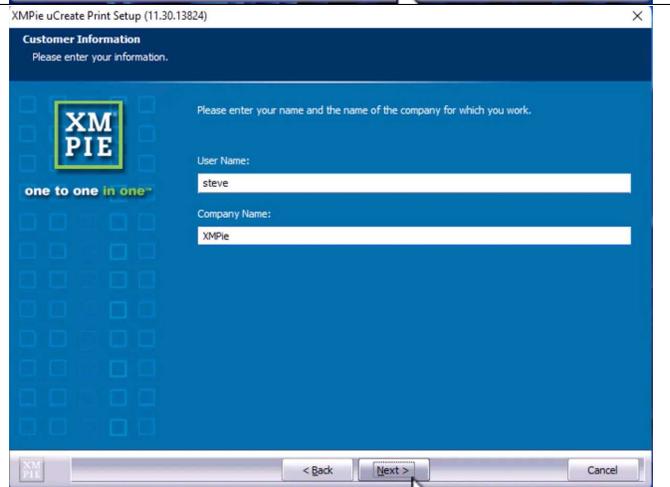

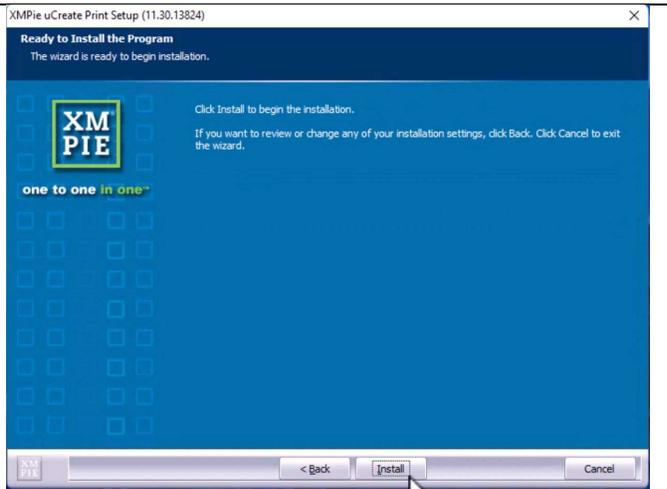

Read and agree to the license,

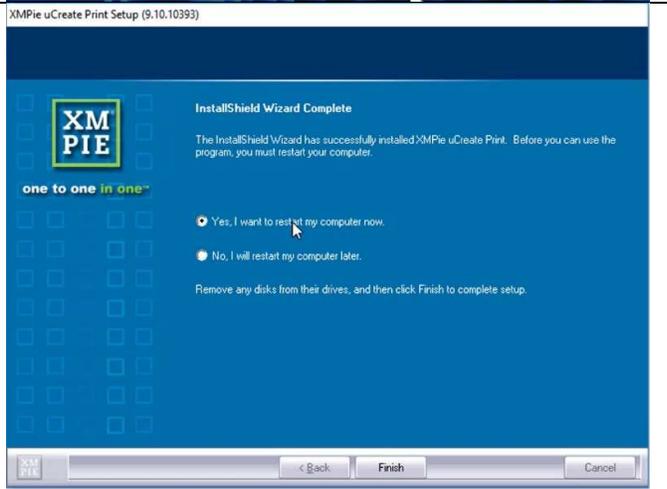

and enter your name and company. The installer is very basic with no configuration settings to make.

The installer will always add uCreate to the latest compatible version of InDesign that it finds on the computer. So, if you have multiple versions of InDesign, uCreate will only be installed into the latest InDesign version it supports.

It is recommended to reboot to make sure everything is setup correctly.

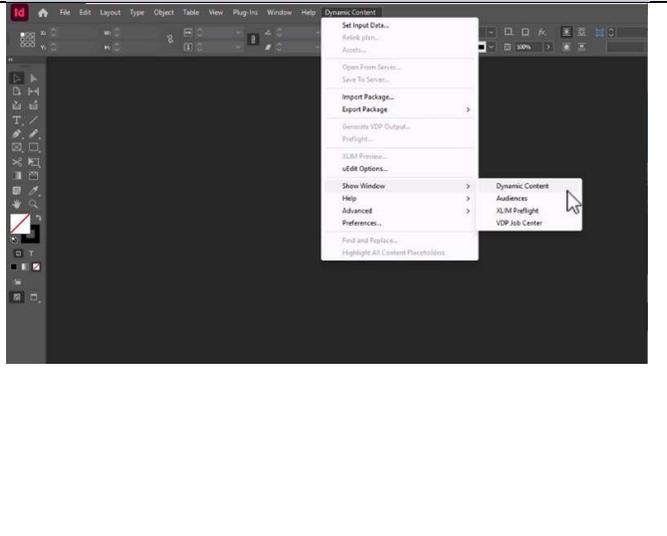

After restarting, open Adobe InDesign.

You can tell the installation was successful if you see “Dynamic Content” in the InDesign menu bar.

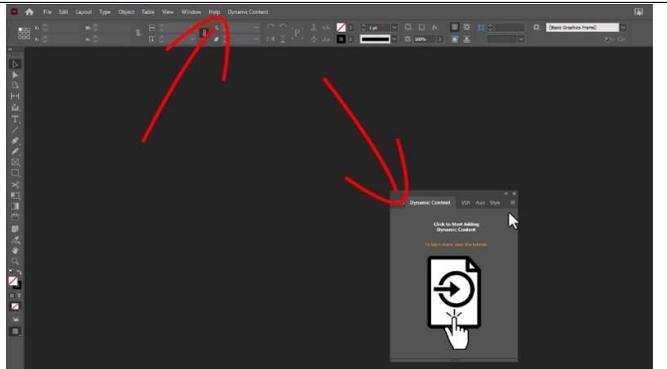

You can also open the Dynamic Content panel from this menu.

In addition to the Dynamic Content panel, there are also panels for Audiences, XLIM/Personalia Preflight, and VDP Job Center.

There are separate videos about these tools later in this e-Learning course.

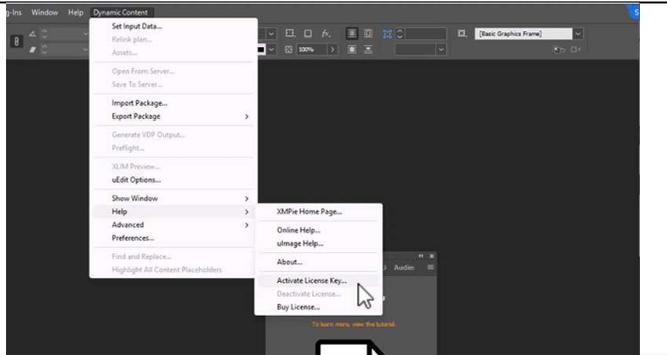

To create your VDP templates, you will use both the Dynamic Content menu and panel.

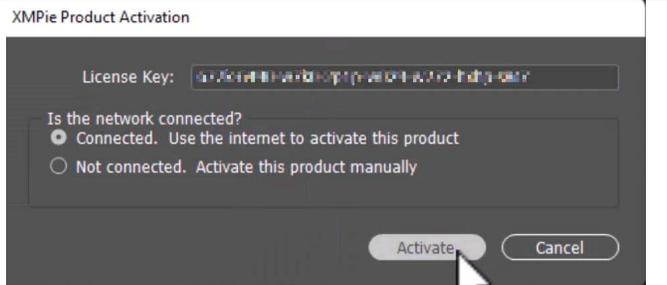

After installation, the software will be in "trial" or "free" mode.

If you have a uCreate license you can now activate it here.

If your computer has access to the internet, simply add your license and click to activate.

If you don't have a license, uCreate will work in trial mode so you can evaluate the software.

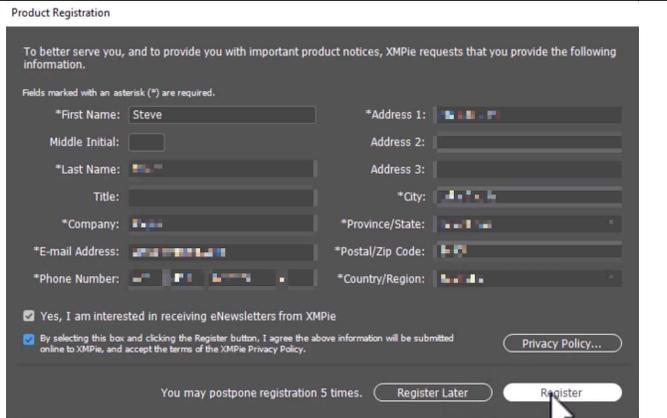

The features available to you in uCreate are controlled by the license you activate. The XMPie help page for uCreate includes a link that describes the different capabilities for each product tier. In the free trial mode, for example, you will not be able to create VDP output or use XMPie server features like connectivity or exporting document or campaign packages. So, if you have a license, you should activate it now.

### uCreate Print Packages

Each package includes plug-in capabilities depending on the license that you own, as described below:

Product	VDP Output	Connectivity	XLIM	uImage	uChart	Export CPKG & DPKG	Personalia Package	Trial Availability
uCreate (free)	x	x	✓	x	x	x	✓	x
uCreate Designer	x	✓	✓	x	x	✓	✓	✓
uCreate Print	✓	✓	✓	x	x	✓	✓	✓
uCreate Print Studio	✓	✓	✓	✓	✓	✓	✓	✓

After activating, you will be asked to register. You can choose Register Later up to 5 times if you wish. I also recommend you check the box to receive information from XMPie Marketing. There is only one newsletter each month and you can learn new tips and tricks as well as find announcements about new versions and upgrades.

If you need to find it in future, the "about" panel will show your license key and any list any additional activated features.

That's it! You are now setup and ready to continue with the following training modules or to start using the product.
